

MVIS Launches the MVIS Global Hydrogen Economy Index

Innovative alternative energy index that targets companies developing the global hydrogen-based energy industry.

Frankfurt (22 December 2020) – [MV Index Solutions GmbH \(MVIS[®]\)](#) today announced the launch of the [MVIS Global Hydrogen Economy Index \(ticker: MVHTWO\)](#). The Index is a global index that tracks the performance of the global hydrogen economy.

“We are pleased to launch our fourth green energy-related index and third such index that targets pure-play exposure to a specific green energy segment. Hydrogen-based energy has tremendous potential to replace traditional energy sources due to the stability of the energy supply and virtually zero-emissions energy generation process. We believe investors recognize that not all clean-energy industries will follow the same growth curve and by offering narrow segments within clean energy we enable investors to express their investment theses more explicitly,” said Josh Kaplan, Global Head of Research & Investment Strategy at MV Index Solutions.

The [MVIS Global Hydrogen Economy Index](#) is weighted by free float market capitalisation and is calculated in USD as a price and a total return net index. Capping factors are applied to avoid overweighting of single index companies. The index is reviewed on a quarterly basis. Detailed information about the indices, including methodology details and index data are available on the [MV Index Solutions website](#).
