

OCTOBER 2023

Digital Assets Quarterly

Chart Pack

Macro Economic Influences on Crypto: The Fed raised interest rates by 25 bps in July but didn't in September, influencing the 10-Year Treasury Bond Yield to reach 4.79%, a rate not seen since 2007.

Economic stagnation in the EU contrasted with positive economic signs in the UK, with the lowest inflation level in a year.

Digital assets have displayed remarkable resilience. Over the past four weeks, even as equities trended downward, the majority of digital asset sectors remained in positive territory. Notably, the narrative around AI has been particularly favorable for tokens related to infrastructure applications. Among different classes, DeFi saw substantial growth (+13%), largely driven by AAVE and MKR, which capitalized on yield income from US Treasuries.

The crypto stocks (Coinbase, Galaxy, the miners etc.) were leading up in Q2 and had a horrible Q3. These stocks were indicating institutional demand as they acted as a proxy for crypto exposure for those who can't buy coins.

Bitcoin isn't behaving like a traditional macro asset. When examining cross-asset correlations, Bitcoin demonstrates an almost zero correlation with other assets. Within crypto, basically large cap tokens are outperforming the small cap token.

Ethereum's Scaling and L2 Network Development. Ethereum's scaling strategy is being embraced as Layer 2 networks gain traction. Leading Ethereum scaling platforms have seen a triple increase in active users from 2022 to 2023.

Growth of Tokenization and Integration with Traditional Finance: Chainlink demonstrated tokenized carbon credit units' purchase. Prominent players in the crypto space collaborated to form the Tokenized Asset Coalition to advance the concept of tokenizing world assets.

The MarketVector™ Figment Ethereum Staking Reward Reference Rate allows market players to develop products that offer a comprehensive return perspective. Additionally, this rate can serve as the foundation for key derivatives that facilitate risk shifting between those looking to hedge and those aiming to speculate.

Q3 Overview: Dollar & Commodities Emerge as Top Performers.

Cross Asset Return: Crypto Sectors and Traditional Asset Classes
 Cumulative Return: 2023-06-30 to 2023-09-29

Digital Asset Classification Scheme

There is currently no standard definition of digital asset types, as there are for securities in various jurisdictions. Drawing distinctions between different types of digital assets is important because the regulatory treatment of a particular digital asset depends in large part on whether or not it is a “security”. MarketVector Indexes™ categorizes digital asset coins into distinct, non-overlapping categories that form the building blocks of a new crypto classification scheme. Categories capture the value and use case related to a coin. Using a qualitative process, each coin is categorized into one category.

Category	Definition	Examples
DeFi	Financial services built on top of distributed networks with no central intermediaries	Uniswap, Aave
Exchange	Tokens owned and operated by a centralized cryptocurrency exchange	Binance, OKB
Infrastructure Applications	A decentralized computer program designed to perform specific tasks	Polygon, Chainlink, The Graph
Media & Entertainment	Used to reward users for content, games, gambling or social media	Axie Infinity, Basic Attention Token, Decentraland
Payments	Digital, non-stable money for use in a distributed network	Bitcoin Cash, Litecoin, wallet apps
Smart Contract Platforms	Blockchain protocol designed to host variety of self-developed and 3rd party applications	Ethereum, Cardano, Solana
Stablecoins	Designed to minimize volatility by pegging to a more stable asset	Tether, USDC
Store of value	Designed to hold or increase purchasing power over time	Bitcoin

It is not possible to invest directly in an index. Exposure to an asset class represented by an index is available through investable instruments based on that index. MarketVector does not sponsor, endorse, sell, promote, or manage any investment fund or other investment vehicle that is offered by third parties and that seeks to provide an investment return based on the performance of any index. MarketVector makes no assurance that investment products based on the index will accurately track index performance or provide positive investment returns. MarketVector is not an investment advisor, and it makes no representation regarding the advisability of investing in any such investment fund or other investment vehicle. A decision to invest in any such investment fund or other investment vehicle should not be made in reliance on any of the statements set forth in this document.

Investments into cryptocurrencies and/or digital assets are subject to material and high risk including the risk of total loss. The calculated prices may not be achieved by investors as the calculated price is based on prices from different trading platforms. Furthermore, an investment into cryptocurrencies and/or digital assets may become illiquid depending on the trading platform or investment product used for the specific investment. Investors should carefully review all risk factors disclosed by the relevant trading platform or in the product documents of relevant investment products.

Prospective investors are advised to make an investment in any such fund or other vehicle only after carefully considering the risks associated with investing in such funds, as detailed in an offering memorandum or similar document that is prepared by or on behalf of the issuer of the investment fund or other vehicle. The inclusion of a security within an index is not a recommendation by MarketVector to buy, sell, or hold such security, nor is it considered to be investment advice.

All information shown prior to the index launch date is simulated performance data created from backtesting ("Simulated past performance"). Simulated past performance is not actual but hypothetical performance based on the same or fundamentally the same methodology that was in effect when the index was launched. Simulated past performance may materially differ from the actual performance. Actual or simulated past performance is no guarantee for future results.
